

The Hong Kong University of Science and Technology (HKUST)

World's No. 36, Asia's No. 1 University for three consecutive years

President's Talk: HKUST, Rising Asia and Global Impact

By Prof. Tony Chan

President Tony Chan of HKUST is honored to meet and share with students, scientists and academia in Japan his insights on the latest trends in higher education, science and technology in Asia.

Globalization, which calls for response among different sectors and stakeholders from around the world, brings opportunities along with challenges. As such, rising Asia in the global arena is playing an increasingly important role in addressing global imperatives and shaping international agenda. In the global marketplace, no champion can excel on its own.

In this President's Talk, Prof. Tony Chan will share with the audience his insights on the exciting global opportunities presented for talents in light of the 'new' internalization. Questions we will explore include what are the key trends to look out for and how we get ourselves best prepared for those opportunities? Please come and join us to exchange views and explore new ideas.

RSVP at your earliest convenience: <http://events.ust.hk/keio-u>
